You are eligible for:

- 1) Cal Fresh
- 2) Medi-Cal

Easy Apply

Idea 3: Finding Social Programs and Resources

With one click, the first step towards benefiting from social welfare programs like CalFresh is taken.

"There's an app to help you organize all of your information and help you apply for the help you need."
"Really? What's it called?"

Target Demographic

Our main target group for this application would be those individuals who potentially qualify for social welfare programs, but may not be aware of them because of a lack of knowledge. We also hope to provide for people who want an easier or more convenient way of finding social welfare programs available near them. These target groups can best be described as low-income students or families attending or residing near UC Berkeley. They also may include families or individuals with different language backgrounds that may require assistance with the discovery and completion of these program applications.

Project Description

The main goal of our application is to help and assist users in discovery and completion of lengthy social program applications. Our app helps to find the resources you are eligible for and assist you through completing the form. Other features include, saving of personal information, securely, to save time completing the forms, as well as remind to renew certain registrations if needed. One additional feature we hope to add is language feature to guide those unfamiliar with the language of the application; through translating the given form into different languages, so users are able to fill out the forms more easily.
